high-quality three-layer plating**

of palladium, platinum and rhodium. ensures long-lasting tarnish protection

Individual certificate with forgery-proof print finish

verifies the quality of the inset stones

Exclusive silk packaging

velvet-lined silk packaging

EACH PIECE IS A TRUE „HANDICRAFT“

Your piece of Diamonfire jewellery is a special item of careful and detailed handicraft and not a machine-made product.

For this reason, we would like to point out that it is not impossible for the stone to come loose from its setting after a while. After all, the stones were set by people by hand, and not by machines. On the other hand, this is an important added value for pieces of Diamonfire jewellery: they are finished with love and attention to detail and each piece has a personal touch.

Besides the special quality of the stones used, each piece of Diamonfire jewellery has a high quality surface finish (three-layer plating) of rhodium, palladium and platinum.

This lends 925 sterling silver the incomparable splendour of 18-carat white gold. Moreover, the three-layer plating provides long lasting protection against tarnishing.

In order to prevent signs of wear over time and to keep your favourite items of Diamonfire jewellery in good condition, we offer some care and storage tips here.

PRECAUTION

Your Diamonfire jewellery should not come into contact with cosmetics such as make-up, sun cream, powder, perfumes, deodorants or hairspray, etc., as these can dull the jewellery and the surface. The contents of the cosmetics can cause discoloration or tarnishing.

You should take off your Diamonfire jewellery when showering, doing housework and gardening.

Avoid contact with acids, salts or corrosive liquids. Sweat or taking certain medicines can also lead to discolouration of your jewellery.

For the same reason, avoid wearing your jewellery during sports. The use of certain sports equipment can lead to impact scratches and scuffs. Such damage is usually irreparable.

Don't forget to take off your Diamonfire jewellery when swimming, because chlorine and salt water can cause the jewellery to lose its brilliance. Jewellery should also not be worn when using sun baths or saunas.

Exceptional care is advised for pearl necklaces, as the thread can get wet and will no longer dry properly. This often results in the pearls rotting from the inside.

STORAGE

The best way to preserve jewellery is in a casket with a soft lining and as many dividers as possible.

If possible, keep your jewellery in air-tight containers or small plastic bags. Don't store your jewellery in damp places, for example, in the bathroom. (Add additional pieces of aluminium foil or school chalk, which should help your jewellery retain its brilliance).

You can also lay special anti-tarnish cloths on your jewellery (silver anti tarnish strips).

If possible, store each piece of jewellery separately from one another to avoid friction that can cause scratches or surface damage.

Keep your jewellery in a specially designated place. Please make sure that your jewellery is not exposed to movement, abrasion or shocks. You should therefore not keep your jewellery in your wallet or purse.

Ideal surfaces are soft fabrics such as velvet, fleece, satin or similar. It is important that jewellery not be kept on any hard or rough surfaces, as these can leave scratches.

CARE

Cleaning silver or gold-plated jewellery

The best way to remove sweat and fine dirt particles is with a soft, lint-free cloth. For stubborn stains, you can additionally use warm water. In any case, jewellery should not come into contact with chemicals.

Rhinestones and pearls should never be submerged in water, and fashion jewellery should never be used in silver baths or any other cleaning baths. Make sure that you clean the jewellery individually and don't use strong cleaning products or solvents under any circumstances.

Pearls are made from organic material and cannot be cleaned with soap. Use a soft oilcloth to preserve the lustre of the pearl. However, be especially cautious when cleaning pearls, as moisture in particular can severely damage the pearls and thread.

Don't use abrasive cleaning products (including jewellery polishing cloths) for plated and gold-plated jewellery, as they can remove the surface-coating.

Other useful tips

Earrings: If the poussettes (closures for your earrings) loosen over time due to strain, you can tighten them again by gently squeezing their jaws with your thumb and forefinger.

Do not clean any jewellery which is damaged. If the surface is broken or cracked, it could make the damage worse.
